Student Roll No	Fa23/BSCS/166
Section	E
Subject	Cloud Computing
Instructor Name	Sir Shahid

Lab 12

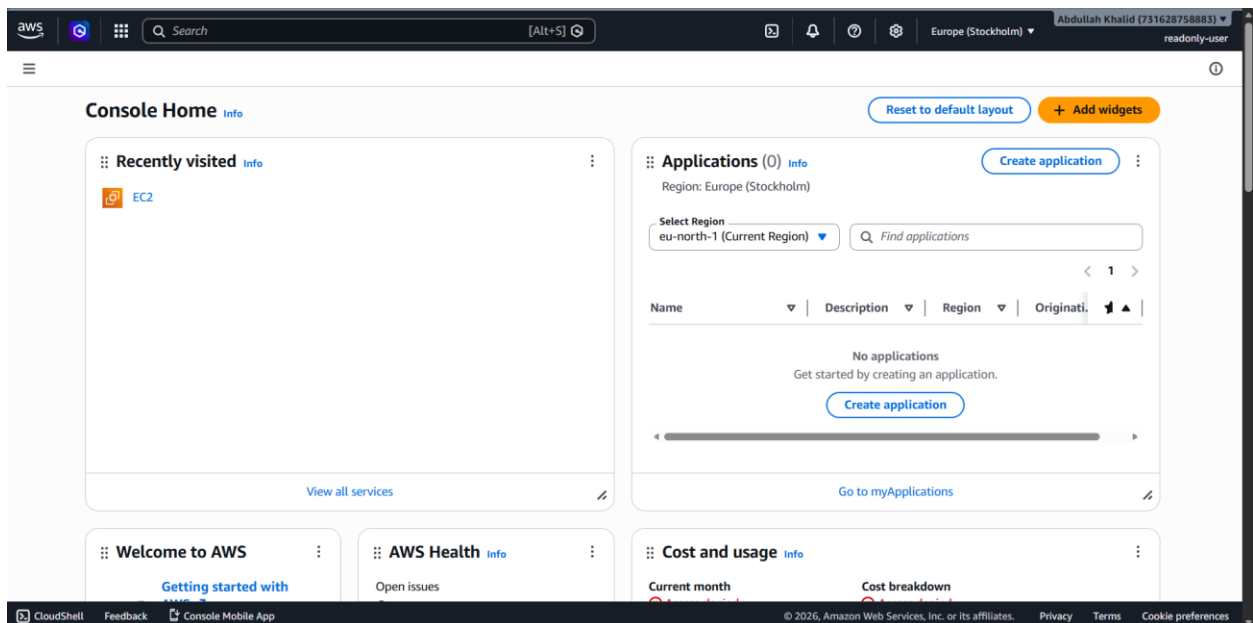

Identity and Access Management (IAM)

Q1: Create read-only IAM user and test restrictions.

readonly-user created and ReadOnlyAccess permission added:

readonly-user dashboard:

EC2 instance failed to create due to read only permission policy:

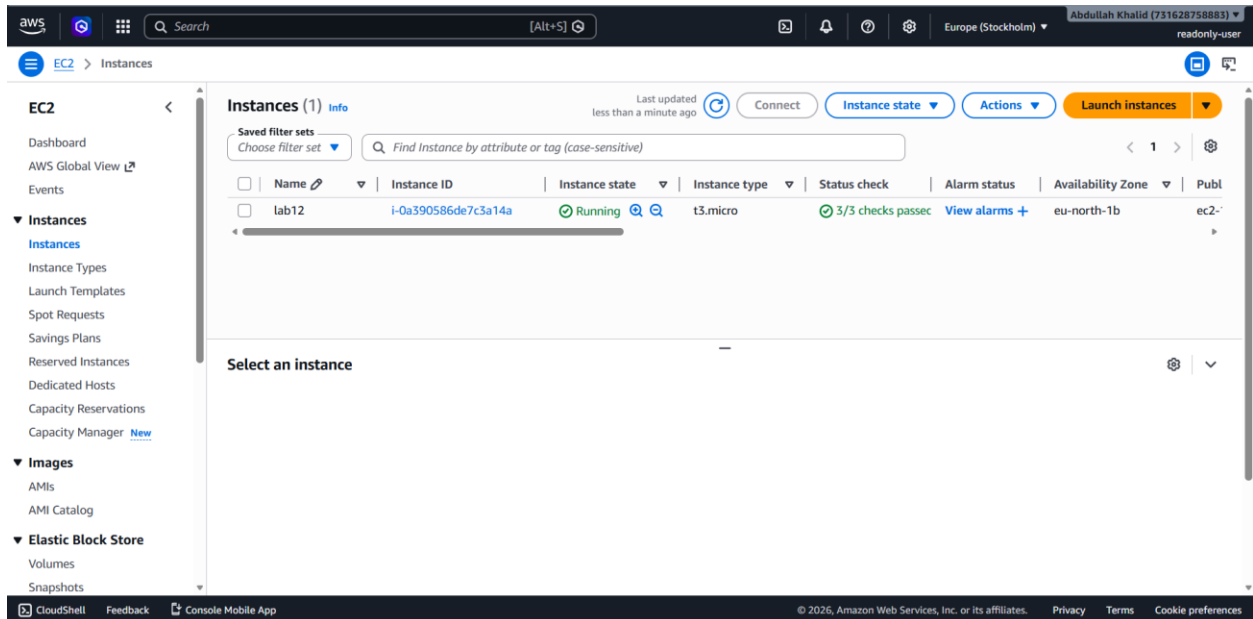

The screenshot shows the AWS Management Console interface. At the top, the navigation bar includes the AWS logo, a search bar, and the user's name 'Abdullah Khalid (731628758883)' with a dropdown arrow. Below the navigation bar, the breadcrumb trail reads 'EC2 > Instances > Launch an instance'. A prominent red error banner at the top of the main content area states: 'Instance launch failed'. The message explains that the user 'arn:aws:iam::731628758883:user/readonly-user' is not authorized to perform the 'ec2:CreateSecurityGroup' action. It includes an encoded authorization failure message and a 'Diagnose with Amazon Q' button. Below the error banner, the 'Launch log' section shows the progress of the instance launch. 'Initializing requests' is marked as 'Succeeded', while 'Creating security groups' is marked as 'Failed'. At the bottom of the launch log, there are three buttons: 'Cancel', 'Edit instance config', and 'Retry failed tasks'. The footer of the console shows 'CloudShell', 'Feedback', 'Console Mobile App', and copyright information for Amazon Web Services, Inc.

Q2: Attach AdministratorAccess policy and compare permissions.

Policy added of administrator access in readonly-user:

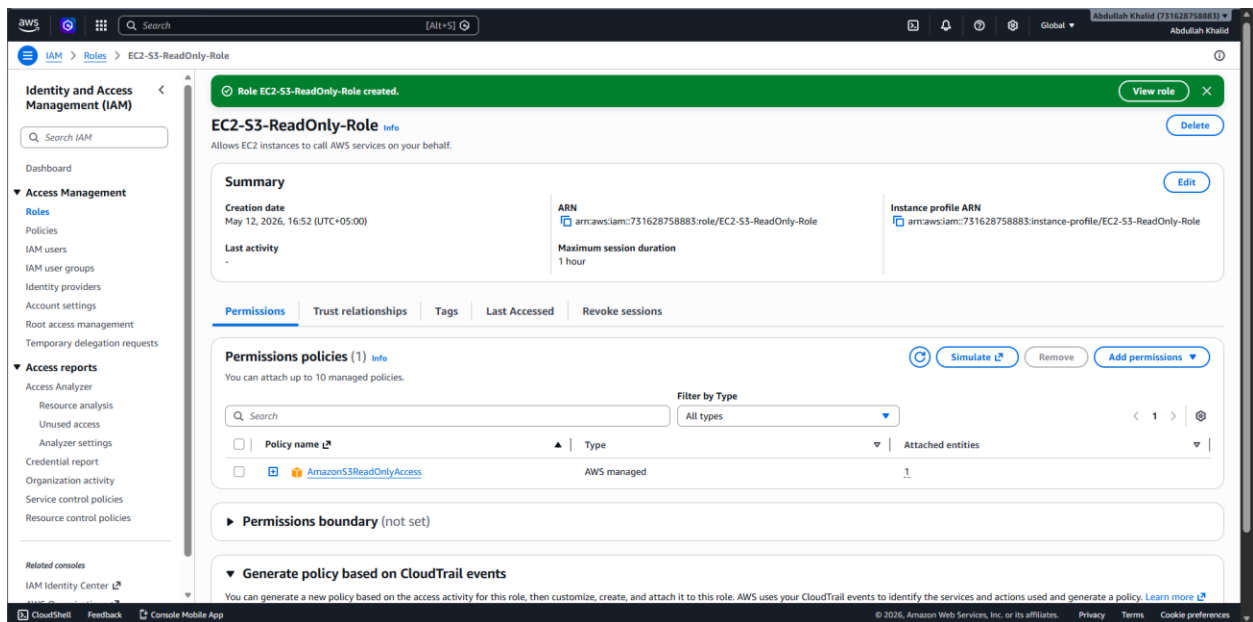

The screenshot displays the AWS IAM console. The left-hand navigation pane shows the 'Identity and Access Management (IAM)' section, with 'Access Management' expanded to show 'Policies'. The main content area shows the details for the 'readonly-user'. A green banner at the top indicates '1 policy added'. The 'Summary' section shows the user's ARN as 'arn:aws:iam::731628758883:user/readonly-user', created on May 12, 2026, and last signed in today. It also shows 'Console access' is enabled without MFA and provides a link to 'Create access key'. Below the summary, the 'Permissions' tab is selected, showing 'Permissions policies (3)'. A table lists the attached policies: 'AdministratorAccess' (AWS managed - job function, Attached via Directly), 'IAMUserChangePassword' (AWS managed, Attached via Directly), and 'ReadOnlyAccess' (AWS managed - job function, Attached via Directly). The 'Permissions boundary' is noted as '(not set)'. At the bottom, there is a section for 'Generate policy based on CloudTrail events'. The footer of the console shows 'CloudShell', 'Feedback', 'Console Mobile App', and copyright information for Amazon Web Services, Inc.

Instance get launched after adding administrationAccess:

Q3: Create IAM role for EC2 instance.

IAM Role created for EC2:

Connected IAM Role for EC2 instances:
