

Lahore Garrison University

DHA Phase 6 Lahore

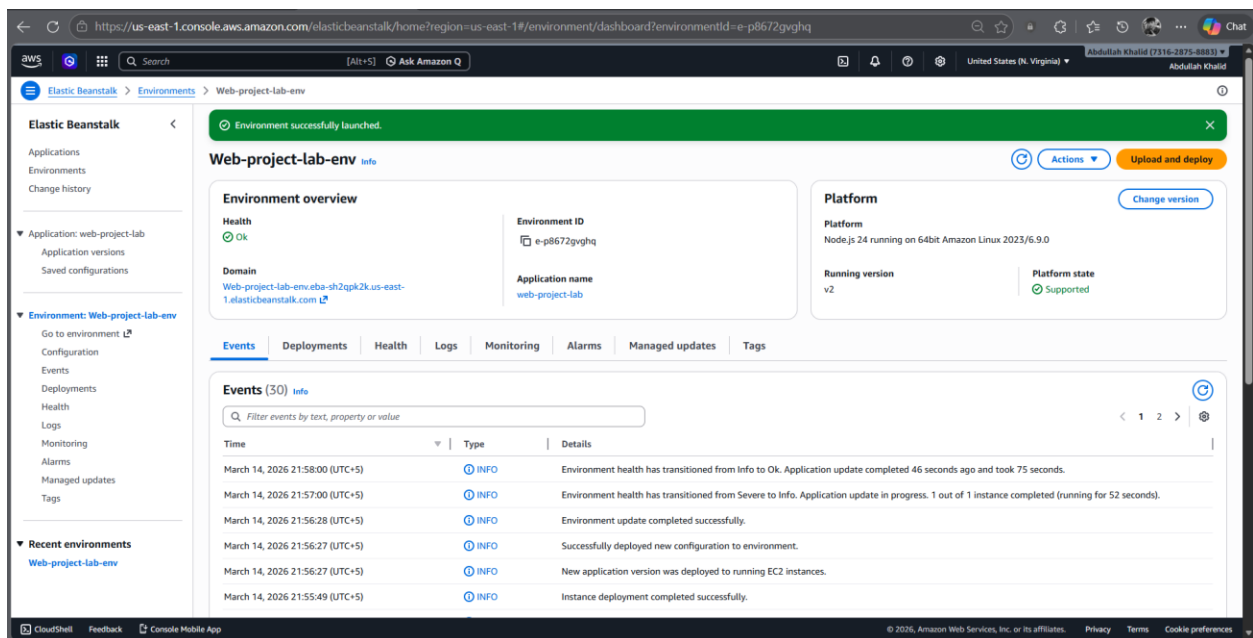

Student Name	Abdullah Khalid
Student Roll No	Fa23/BSCS/166
Section	E
Subject	Cloud Computing
Instructor Name	Sir Shahid

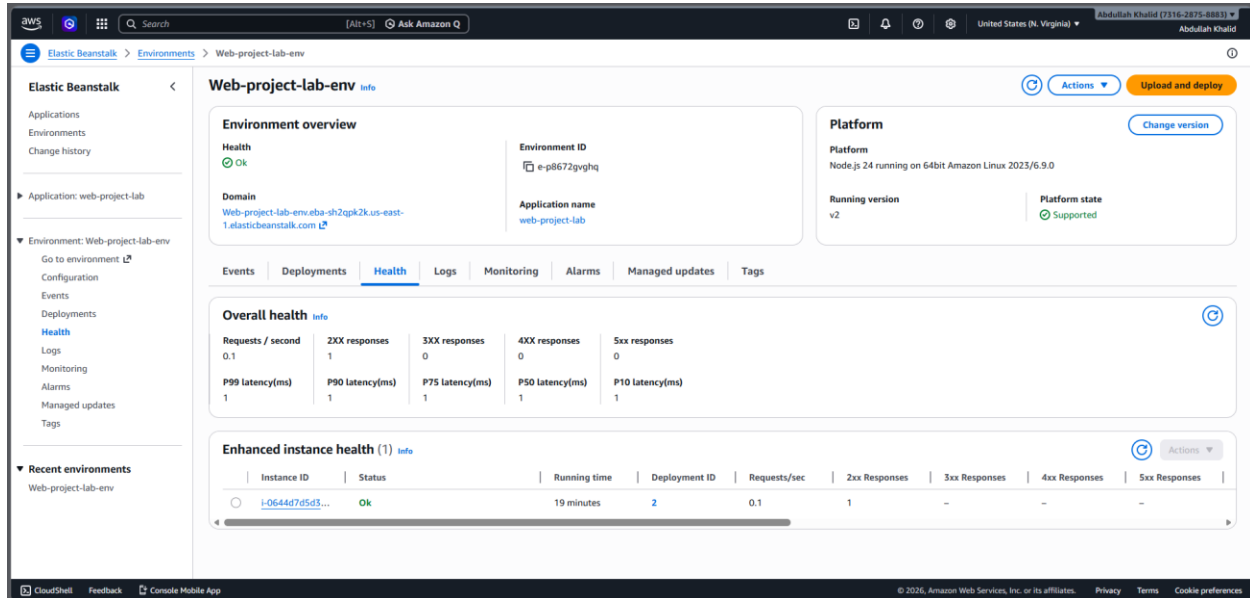

Step 1 – Browser showing the website with the **Elastic Beanstalk URL** visible in the address bar:

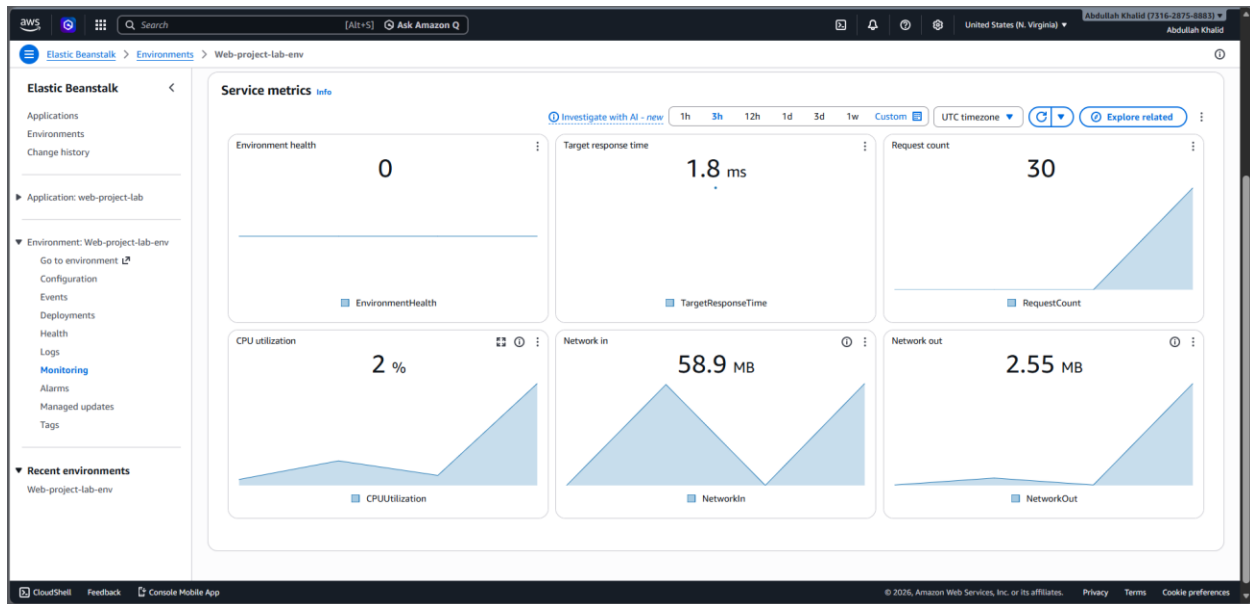

Step 2 – Environment Dashboard:

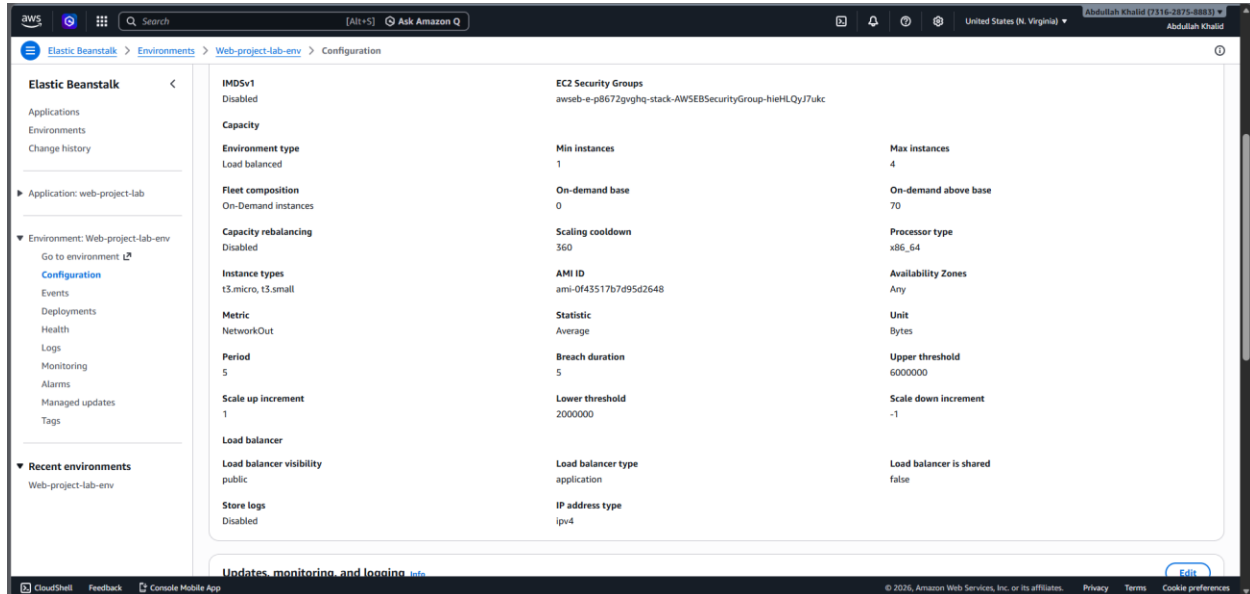

Step 3 – Health Monitoring:

Step 4 – Monitoring Metrics:

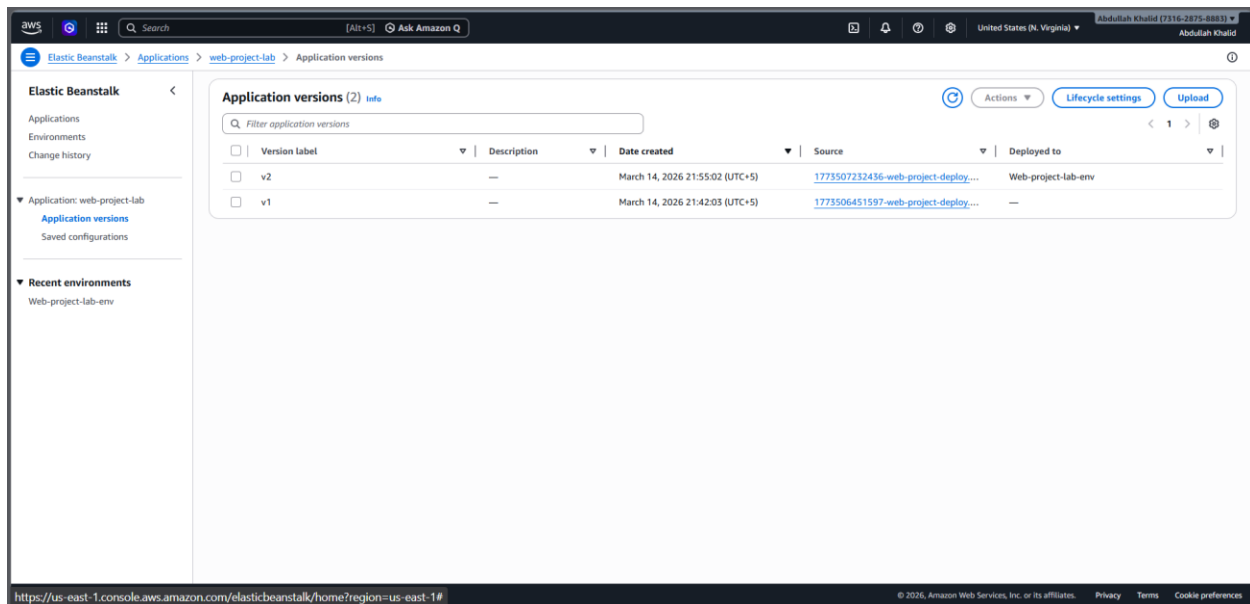

Step 5 – Auto Scaling Settings:

The screenshot shows the AWS Elastic Beanstalk console configuration page for the 'Web-project-lab-env' environment. The left sidebar contains navigation links for Applications, Environments, and Change history. The main content area is divided into two columns. The left column lists various settings such as Capacity, Environment type, Fleet composition, Capacity rebalancing, Instance types, Metric, Period, Scale up increment, Load balancer, Load balancer visibility, and Store logs. The right column displays the values for these settings, including Min instances (1), Max instances (4), On-demand base (0), On-demand above base (70), Processor type (x86_64), Availability Zones (Any), Unit (Bytes), Upper threshold (6000000), Scale down increment (-1), Load balancer type (application), and Load balancer visibility (public).

Setting	Value
Capacity	Min instances: 1, Max instances: 4
Environment type	Load balanced
Fleet composition	On-Demand instances
Capacity rebalancing	Disabled
Instance types	t3.micro, t3.small
Metric	NetworkOut
Period	5
Scale up increment	1
Load balancer	Load balancer visibility: public
Store logs	Disabled
EC2 Security Groups	awseb-e-p8672gvghq-stack-AWSEBSecurityGroup-hiehLQyJ7ukc
On-demand base	0
On-demand above base	70
Processor type	x86_64
Availability Zones	Any
Unit	Bytes
Upper threshold	6000000
Scale down increment	-1
Load balancer type	application
Load balancer visibility	public
IP address type	ipv4

Step 6 – Version Deployment Proof:

The screenshot shows the AWS Elastic Beanstalk console 'Application versions' page for the 'web-project-lab' application. The page displays a table of application versions, including version labels, descriptions, dates created, source bundles, and deployment targets.

Version label	Description	Date created	Source	Deployed to
v2	—	March 14, 2026 21:55:02 (UTC+5)	1773507232436-web-project-deploy...	Web-project-lab-env
v1	—	March 14, 2026 21:42:03 (UTC+5)	1773506451597-web-project-deploy...	—

Conclusion:

- Deployed a sample web application on AWS Elastic Beanstalk.
- Uploaded the project as a **source bundle** and **launched the environment**.
- **Updated the application and redeployed** it as a new version.
- Enabled **auto scaling and load balancing** for the environment.
- **Monitored application health and performance** using Elastic Beanstalk tools.
